技术规格

Background:	This gene encodes a copper chaperone that plays a role in copper homeostasis by binding and transporting cytos olic copper to ATPase proteins in the trans-Golgi network for later incorporation to the ceruloplasmin. This prote in also functions as an antioxidant against superoxide and hydrogen peroxide, and therefore, may play a significant role in cancer carcinogenesis. Because of its cytogenetic location, this gene represents a candidate gene for 5 q-syndrome.
Applications:	ELISA, IHC
Name of antibody:	ATOX1

Immunogen:	Fusion protein of human ATOX1
