Background:	The yeast heterotetrameric GINS complex is made up of Sld5, Psf1 (GIN1; MIM 610608), Psf2 (GIN2; MIM 610609), and Psf3 (GIN3; MIM 610610). The formation of the GINS complex is essential for the initiation of DNA replication in yeast and Xenopus egg extracts (Ueno et al., 2005 [PubMed 16287864]). See GIN1 for additional information about the GINS complex.
