技术规格

Background:	The protein encoded by this gene belongs to the highly conserved cyclin family, whose members are characterized by a dramatic periodicity in protein abundance throughout the cell cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct expression and degradation patterns which contribute to the temporal coordination of each mitotic event.
Applications:	WB
Name of antibody:	CCND1(Phospho-Thr286)
Immunogen:	Peptide sequence around phosphorylation site of

	threonine 286 (A-C-T(p)-P-T) derived from Human Cyclin D1.
