技术规格

Background:	The protein encoded by this gene is a transmembrane glycoprotein that is a member of the protein kinase superfamily. This protein is a receptor for members of the epidermal growth factor family. EGFR is a cell surface protein that binds to epidermal growth factor. Binding of the protein to a ligand induces receptor dimerization and tyrosine autophosphorylation and leads to cell proliferation. Mutations in this gene are associated with lung cancer.
Applications:	WB
Name of antibody:	EGFR(Phospho-Tyr1016)

Immunogen:	Peptide sequence around phosphorylation site of Tyrosine 1016 (D-E-Y(p)-L-I) derived from Human EGFR.
Full name:	epidermal growth factor receptor
Synonyms :	ERBB; HER1; mENA; ERBB1; PIG61
SwissProt:	P00533
WB Predicted band size:	134 kDa
WB Positive control:	Hela cells lysates
WB Recommended dilution:	500-1000
