技术规格

Background:	ETS translocation variant 2 (ETV2), also known as ETS RP and ER71, is a 37 kDa transcription factor that is expressed in presumptive vascular progenitor cells. It plays an important role in vascular development by promoting the expansion of hemangioblasts and vascular endothelial cells while inhibiting differentiation in cardiomyocytes. It contains one ETS DNA binding domain (aa 234-314). Within aa 125-231, mouse ETV 2 shares 54% and 85% aa sequence identity with human and rat ETV2, respectively.
Applications:	ELISA, IHC
