技术规格

Background:	The membrane protein encoded by this gene is a hyperpolarization-activated cation channel that contributes to the native pacemaker currents in heart and neurons. The encoded protein can homodimerize or heterodimerize with other pore-forming subunits to form a potassium channel. This channel may act as a receptor for sour tastes.
Applications:	ELISA, WB, IHC
Name of antibody:	HCN1
Immunogen:	Synthetic peptide of human HCN1
Full name:	hyperpolarization activated cyclic nucleotide-gated potassium channel 1

Synonyms :	BCNG1, HAC-2, BCNG-1
SwissProt:	O60741
ELISA Recommended dilution:	1000-5000
IHC positive control:	Human thyroid cancer
IHC Recommend dilution :	25-100
WB Predicted band size:	99 kDa
WB Positive control:	Hela cells
WB Recommended dilution:	500-2000
