技术规格

Background:	Activation of members of the mitogen-activated protein kinase family is a major mechanism for transduction of extracellular signals. Stress-activated protein kinases are one subclass of MAP kinases. The protein encoded by this gene functions as a signal transducer during differentiation of myoblasts to myotubes.
Applications:	ELISA, WB, IHC
Name of antibody:	MAPK12
Immunogen:	Fusion protein of human MAPK12
Full name:	mitogen-activated protein kinase 12
Synonyms :	ERK3; ERK6; SAPK3; PRKM12; SAPK-3; P38GAMMA

SwissProt:	P53778
ELISA Recommended dilution:	2000-5000
IHC positive control:	Human liver cancer and human breast cancer
IHC Recommend dilution:	25-100
