技术规格

Background:	The product of this gene belongs to the ligand-gated ion channel receptor superfamily. This gene encodes subunit B of the type 3 receptor for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. This receptor causes fast, depolarizing responses in neurons after activation. It is not functional as a homomeric complex, but a pentaheteromeric complex with subunit A (HTR3A) displays the full functional features of this receptor.
Applications:	ELISA, IHC
Name of antibody:	HTR3B

Immunogen:	Synthetic peptide of human HTR3B
Full name:	5-hydroxytryptamine (serotonin) receptor 3B, ionotropic
Synonyms:	5-HT3B
SwissProt:	O95264
IHC positive control:	Human gastric cancer and human thyroid cancer
IHC Recommend dilution:	25-100
