

小鼠抗 E2-Crimson 单克隆抗体

- 中文名称： 小鼠抗 E2-Crimson 单克隆抗体
- 英文名称： Anti-E2-Crimson mouse monoclonal antibody
- 相关类别： 标签抗体
- 储 存： 冷冻（-20℃） 避光
- 宿 主： Mouse
- 抗 原： E2-Crimson
- 反应种属： E2-Crimson
- 标 记 物： Unconjugate
- 克隆类型： mouse monoclonal

技术规格

Background:	The E2Tag is a peptide which is derived from the Bovine Pappillomavirus type-1 transactivator protein E2 and consists of 10 amino acids(SSTSSDFRDR). The detection of E2-tagged proteins is based on the binding of mouse monoclonal antibodies specific to the tagged recombinant protein. Crimson is a strong, red colour, inclining to purple. It originally meant the color of the kermes dye produced from a scale insect, <i>Kermes vermilio</i> , but the name is now sometimes also used as a generic term for slightly bluish-red colours that are between red and rose
Applications:	WB
Name of antibody:	E2-Crimson

Immunogen:	This antibody is raised against a recombinant protein and recognizes the E2-Crimson protein.
Full name:	E2-Crimson
WB Predicted band size:	26 kDa
WB Positive control:	HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY E2-Crimson ne) cDNA for 48 hrs and lysed
WB Recommended dilution:	1000-5000
