技术规格

Background:	Microtubules, key participants in processes such as mitosis and intracellular transport, are composed of heterodimers of alpha- and beta-tubulins. The protein encoded by this gene is a beta-tubulin. Defects in this gene are associated with complex cortical dysplasia with other brain malformations-5. Two transcript variants encoding distinct isoforms have been found for this gene.
Applications:	ELISA, WB, IHC
Name of antibody:	TUBB2A
Immunogen:	Fusion protein of human TUBB2A
