## 技术规格

**Background:** 

Ubiquitin is an important cellular signal that targets p roteins for degradation or regulates their functions. U BL7 (ORF name SB132) encodes ubiquitin-like protein 7 also named bone marrow stromal cell ubiquitin-like protein (BMSC-UbP) capable of binding ubiquitin. BM SC-UbP protein is derived from bone marrow stromal cells containing a ubiquitin-associated (UBA) domain a t the C terminus that has been implicated in linking c ellular processes and the ubiquitin system. BMSC-UbP mRNA is widely expressed in human multiple tissues and various tumor cell lines and is decreased in BMS

	C stimulated with phorbol myristate acetate (PMA) su ggesting a role in regulation of BMSC function.
