技术规格

Background:	This gene encodes a member of a superfamily of divalen t cation-dependent phosphodiesterases. The encoded pro tein associates with CD40, tumor necrosis factor (TNF) re ceptor-75 and TNF receptor associated factors (TRAFs), a nd inhibits nuclear factor-kappa-B activation. This protein has sequence and structural similarities with APE1 endon uclease, which is involved in both DNA repair and the ac tivation of transcription factors.
