技术规格

Background:	Adapter protein which acts downstream of several membrane receptors including cytokine, antigen, hormone, cell matrix and growth factor receptors to regulate multiple signaling pathways. Regulates osteoclast differentiation mediating the TNFRSF11A/RANK signaling. In allergic response, it plays a role in mast cells activation and degradation through PI-3-kinase regulation. Also involved in the regulation of cell proliferation and hematopoiesis.
Applications:	WB
Name of antibody:	GAB2(Ab-623)
Immunogen:	Synthesized non-phosphopeptide derived from human G ab2 around the phosphorylation site of serine 623 (P-S-

	S(p)-P-S).
Full name:	GRB2-associated binding protein 2
Synonyms :	KIAA0571
SwissProt:	Q9UQC2
WB Predicted band size:	74 kDa
WB Positive control:	COS cells lysate
WB Recommended dilution:	500-3000
