技术规格

Background:	This gene encodes a protein belonging to the 'wi th no lysine' family of serine-threonine protein ki nases. These family members lack the catalytic lys ine in subdomain II, and instead have a conserve d lysine in subdomain I. This family member functions as a positive regulator of the transcellular C a2+ transport pathway, and it plays a role in the increase of cell survival in a caspase-3-dependent pathway. Alternative splicing results in multiple transcript variants.
